1. Aims

This policy aims to:

- Set out our school's approach to allergy safety, including reducing the risk of exposure and the procedures in place in case of allergic reaction
- Make clear how our school supports students with allergies to ensure their wellbeing and inclusion
- Promote and maintain allergy awareness among the school community

2. Legislation and guidance

This policy is based on the Department for Education (DfE)'s statutory guidance on allergy safety in schools and supporting pupils with medical conditions at school, the Department of Health and Social Care's guidance on using emergency adrenaline auto-injectors in schools, and the following legislation:

- Children's Wellbeing and Schools Act 2026
- The Food Information Regulations 2014
- The Food Information (Amendment) (England) Regulations 2019

3. Roles and responsibilities

3.1 The Governing Board

The Governing Board is responsible for:

- Ensuring the school has an allergy safety policy which sets out:
  - Arrangements to reduce the risk of individuals coming into contact with their known allergens
  - Emergency response plans for cases of anaphylaxis
- Reviewing and approving the Allergy Safety Policy at least annually
- Taking steps to ensure the Allergy Safety Policy is:
  - Generally known within the school and to parents and carers of students at the school
  - At least once a year, brought to the attention of all students, parents/carers, staff and volunteers
  - Published on the school's website
- Ensuring risks relating to students with allergies are included in the risk register and actively managed

The Governing Board delegates the day-to-day implementation of this policy to the Allergy Safety Lead.

3.2 Allergy Safety Lead

The nominated Allergy Safety Lead is Andy Jackson.

They are responsible for:

- Implementing this Allergy Safety Policy
- Contributing to the review of the Allergy Safety Policy
- Promoting and maintaining allergy awareness across our school community
- Developing and reviewing arrangements for the safe storage and disposal of adrenaline devices (AD)
- Ensuring:
  - All staff are aware of the school's policy and procedures regarding allergies
  - Relevant staff are aware of what activities need an allergy risk assessment
  - With the school nurse, that serious incidents and 'near misses' relating to allergy safety are recorded and reported as appropriate, and to consider and share with staff:
    - What lessons there are to learn
    - Any potential changes to the medical conditions and/or allergy safety policies and/or to any student's individual healthcare plan (IHP)

3.3 Head Teacher

The Head Teacher is responsible for:

- Deciding (in discussion with the parents/carers and any relevant healthcare professionals) whether a student's allergy can be managed through the adjustments made under the school's medical conditions policy or whether an IHP is required to specify arrangements that reflect the student's circumstances

3.4 School Nurse

The School Nurse is responsible for ensuring that:

- All students who require support with allergies have an up-do-date (IHP)
- All students with a known food or insect sting allergy have up-to-date allergy action plans issued by a medical professional
- All allergy information is up to date and readily available to relevant members of staff
- All staff receive regular allergy awareness training
- With the Allergy Safety Lead, that serious incidents and 'near misses' relating to allergy safety are recorded and reported as appropriate, and to consider and share with staff:
  - What lessons there are to learn
  - Any potential changes to the medical conditions and/or allergy safety policies and/or to any student's IHP

The School Nurse is also responsible for:

- Checking spare adrenaline auto-injectors (AAIs) are present and in date on a monthly basis
- Making sure that replacement AAIs are obtained when expiry dates approach

3.5 Teaching and support staff

All teaching and support staff are responsible for:

- Promoting and maintaining allergy awareness among students
- Maintaining awareness of our allergy safety policy and procedures
- Being able to recognise the signs of severe allergic reactions and anaphylaxis
- Being aware of specific students with allergies in their care
- Reducing the risk to students with known allergies coming into contact with known allergens
- Ensuring the wellbeing and inclusion of students with allergies
- Reporting any allergic reaction or case of anaphylaxis to the Allergy Safety Lead

3.6 Parents/carers

Parents/carers are responsible for:

- Being aware of our school's Allergy Safety Policy
- Supporting the school to be nut-free
- Providing the school with up-to-date details of their child's medical needs, dietary requirements, and any history of allergies, reactions and anaphylaxis
- If required, providing their child with 2 in-date adrenaline auto-injectors and any other medication, including inhalers, antihistamine etc., and making sure these are replaced in a timely manner
- Following the school's guidance on food brought in to be shared
- Updating the school on any changes to their child's condition

3.7 Students with allergies

If age-appropriate, these students are responsible for:

- Being aware of their allergens and the risks they pose
- Carrying their AD on their person and only using it for its intended purpose
- Understanding how and when to use their AD

3.8 Students without allergies

These students are responsible for:

- Being aware of allergens and the risk they pose to their peers
- Supporting the school to be nut-free

Older students might also be expected to support their peers and staff in the case of an emergency.

4. Identifying individuals at risk

Allergy is a spectrum of different allergic diseases. Reactions occur when a susceptible person is exposed to something (an “allergen”) they are allergic to. Common allergic conditions include:

- Hay fever (allergic rhinitis), triggered by allergens carried in the air, such as pollen, house dust mite, animal fur/feathers, or mould
- Skin allergies (e.g. eczema, contact dermatitis, contact urticaria/hives) caused by contact with allergens including house dust mite, pollen and substances like nickel, latex and some chemicals
- Food allergy, which can cause symptoms ranging from mild itching in the mouth to "whole body" reactions including anaphylaxis
- Asthma which may be triggered by airborne allergens
- Allergy to insect stings and medicines

4.1 Identifying students at risk

We will:

- For new starters, send a form to all parent/carers of students after their place at the school has been confirmed, but before their first school year starts, to confirm any allergy the student has and whether they carry medication. Where a student has a new diagnosis and/or has moved to the school mid-term, we will send a form and put arrangements in place within 2 weeks
- Send a reminder to parents/carers at the start of each year asking them to update their child’s medical information as necessary

We ask that parents/carers proactively inform us by either phone call to the school 01243 787741 or an email to Mrs Monique Langley, School Nurse (langleym@bishopluffa.org.uk) if their child’s medical needs change during the school year.

4.2 Identifying staff and visitors at risk

All new staff complete a medical form prior to an offer of employment being confirmed. This includes identifying allergies and how they are managed. The school’s HR team will invite any new staff with allergies that require additional support into school for a meeting prior to their start date, to reassure both parties that the appropriate management procedures and training are in place.

All visitors who will be coming to an event at school where food is served will be asked to let the named organiser of the event know if they have an allergy that could lead to hospitalisation or loss of life.

Anyone visiting the school for the first time will be asked this question as part of the sign-in process: *do you have an allergy that could lead to hospitalisation or loss of life?* When visitors answer ‘yes’ to this question, they are given a booklet that explains how they can get emergency help in school during their visit.

4.3 Individual healthcare plans (IHP)

Students should have an IHP if they:

- Have an allergy which has a functional impact on them in the school environment
- They are at risk of harm as a result of their allergy; and
- Require arrangements which are additional to or different from those made generally

It is not necessary for a student to have a formal diagnosis of allergy for them to have an IHP. Healthcare professionals may decide that it is more appropriate to accept that the child shows symptoms, rather than proceeding to a formal diagnosis.

The IHP will set out the additional and/or different arrangements that will be in place for supporting the student. The school will make every effort to make sure that arrangements are put in place within 2 weeks, or by the beginning of the relevant term for students who are new to our school.

Not all children with an allergy will require an IHP. Some allergies will have little or no impact on the student while they are at school, or pose no risk to the student. Some allergies will not require arrangements which are additional to or different from those made generally.

The Head Teacher is responsible for deciding (in discussion with the parents/carers and any relevant healthcare professionals) whether a student's allergy can be managed through the adjustments made under the school's medical conditions policy or whether an IHP is required to specify arrangements that reflect the student's circumstances.

The school will consider the following principles:

- If the arrangements or support which a student requires would be available to any student as part of normal policies, an IHP may not be required
- If the student only needs non-prescription medication and the school's medical conditions policy would permit them to carry and administer it, an IHP may not be required

IHPs will be reviewed at least annually and more frequently if the student's needs have changed. Where a student moves on to a new school or college, their IHP will be shared as part of the transition.

4.4 Allergy and asthma action plans

All students who have a known allergy to a food or insect stings should be issued with an appropriate allergy action plan by their healthcare professional.

All students who have asthma should be issued with an asthma action plan by their healthcare professional. The plans include medical and parental consent for staff to administer emergency medicines, including adrenaline for anaphylaxis or reliever inhaler in the event of an asthma attack.

The allergy action plan and/or asthma action plan should be attached to the student's IHP. Whenever the allergy action plan is updated, the student's IHP should be reviewed to incorporate it.

4.5 Record of individuals with known allergies

The school maintains a record of all individuals who have a known allergy. The record includes:

- Known allergens and risk factors for anaphylaxis
- Whether a student has an Individual Healthcare Plan and/or an Allergy Action Plan
- A photograph of each individual (photographs of students will require parental consent)

The record is kept on the Staff Site on Google Drive, where it can be accessed by members of staff only. There is also a note on Arbor next to a student's name, so staff preparing lessons can identify risk.

The school keeps a copy of this record in places where food may be served or handled (including food technology, science, craft and art classrooms). Our catering company has a copy of this list and their staff regularly review the list.

We allow all students to keep their ADs with them to reduce delays, and this allows for confirmation of consent without the need to check the record.

5. Assessing risk

The school will conduct a risk assessment for any student at risk of anaphylaxis taking part in:

- Lessons such as food technology
- Science experiments involving foods
- Crafts using food packaging
- Off-site events and school trips
- Any other activities involving animals or food, such as animal handling experiences or baking

A risk assessment for any student at risk of an allergic reaction will also be carried out where a visitor requires a guide dog.

6. Minimising Risk

6.1 Hygiene procedures

- We are a nut free school, and students are regularly reminded to wash their hands and wipe their mouths if they have had nuts before coming to school
- Students are reminded to wash their hands before and after eating in school
- We explain why the sharing of food, food containers, and food utensils puts people at risk. Duty staff are trained to watch for this and intervene if sharing occurs
- Students are asked to have their own named water bottles
- Any pre-packaged food provided by the school to students with food allergies will be clearly labelled with the name of the child for whom they are intended.

6.2 Catering

The school is committed to providing safe food options to meet the dietary needs of students with allergies.

- Catering staff receive appropriate training and are able to identify students with allergies
- The school will engage with caterers to understand the controls in place to ensure that food service complies with relevant requirements
- School menus are available for parents/carers and students to view with ingredients clearly labelled, and catering staff are available to discuss the provision of allergy safe meals with parents/carers
- Where changes are made to school menus, we will make sure these comply with legislation, and continue to meet any special dietary needs of students
- Food allergen information relating to the 'top 14' allergens is displayed on the packaging of all food products, allowing students and staff to make safer choices. Allergen information labelling will follow all legal requirements that apply to naming the food and listing ingredients, as outlined by the Food Standards Agency (FSA)
- Where food is provided by the school, staff will understand how to read labels for food allergens
- Catering staff follow hygiene and allergy procedures when preparing food to avoid cross-contamination

6.3 Insect bites/stings

When outdoors:

- Shoes should always be worn
- Food and drink should be covered

6.4 Animals

- All students will always wash hands after interacting with animals to avoid putting students with allergies at risk through later contact
- Students with animal allergies will not interact with animals

6.5 Visits and trips

- No students with allergies will be excluded from taking part
- The school will plan accordingly for all visits and trips, and arrange for the staff members involved to be aware of students' allergies and to have received appropriate training
- The school will conduct a risk assessment for any student at risk of anaphylaxis taking part in a school trip
- Students at risk of anaphylaxis should have their own ADs with them
- Staff trained to administer adrenaline in an emergency will be present on the school trip
- Appropriate measures will be taken in line with the school's AD protocols for off-site events and school trips (see section 8.5)

7. Procedures for handling an allergic reaction

- All staff are trained to recognise the signs of both mild and severe allergic reactions (known as anaphylaxis) and respond appropriately
- Staff are trained in the administration of adrenaline to minimise delays in an emergency
- If the student has an allergy action plan, this must be followed
- A spare school AD device will only be used if:
    - The student does not have a prescribed AD
    - The student's prescribed AD are not available or misfire

8. Adrenaline devices (ADs)

8.1 Prescribed ADs

Students who are prescribed ADs are encouraged to keep them near or on their person at all times including when travelling to or from the school and on school trips. It is recommended that two devices are carried at all times. Students with prescribed ADs should take them home with them at the end of each school day, and parents and carers are responsible for ensuring that they are in date.

If a student cannot keep their ADs with them in the classroom (due to age or other considerations), then the devices will be stored:

In the Nurse's Office.
In the Science Technician's Office between S7 and S9
In the SENDCOs office in the Support Department
In the Canteen
In the Head of Art's classroom
In the Sports Hall, and staff will have a mobile kit if a student who is prescribed an AD is taking part in activities on the Sports Field.

Prescribed ADs will be kept at room temperature (in line with manufacturer's guidelines), protected from direct sunlight and extremes of temperature.

All staff in the school will know where the additional ADs are stored, to ensure that rapid action can be taken during break and lunchtime.

All school trips will take an AD if a student with a prescribed AD is on the trip, to ensure there is no delay in administering the AD.

A copy of the student's allergy action plan is kept alongside their medication, as it includes instructions on how it should be used in an emergency.

If staff have to administer prescribed adrenaline, they will report this to the School Nurse, who will record it in the appropriate log and ensure that parental contact is made. The School Nurse will let the Head Teacher know that adrenaline has been administered as soon as possible. The School Nurse will then review the student's allergy action plan.

8.2 Spare Ads and inhalers

Please note: current regulations only allow schools to purchase adrenaline auto-injectors (AAIs) as spare devices. Non-injectable adrenaline devices (nasal spray) may be prescribed to individuals but cannot currently be stocked as a spare device. If an individual who is prescribed nasal adrenaline suffers anaphylaxis, a school's spare AAIs may be used in an emergency. Schools can purchase an emergency asthma reliever inhaler which can only be used if the pupil's prescribed inhaler is not available and where written consent has been obtained.

The School Nurse is responsible for sourcing spare ADs and an emergency asthma reliever inhaler and ensuring they are stored according to the guidance. The current procedures for procuring spare ADs are in Appendix i.

Spare ADs will be stored:
In the Nurse's Office.
In the Science Technician's Office between S7 and S9
In the SENDCOs office in the Support Department
In the Canteen
In the Head of Art's classroom
In the Sports Hall, and staff will have a mobile kit if a student who is prescribed an AD is taking part in activities on the Sports Field
In the First Aid kit provided to Trip Leaders, for all approved off-site activities.

Spare AAIs will be kept:

- In pairs, in case a second one is necessary
- Separate from any students' prescribed ADs and clearly labelled to avoid confusion

The School Nurse is responsible for:

- Checking monthly that spare ADs and the emergency asthma reliever inhaler are present and in date
- Obtaining replacement ADs when the expiry date is near

8.3 Disposal

ADs can only be used once. Once an AD has been used, it will be disposed of in line with the manufacturer's instructions.

8.4 Using spare ADs in an emergency situation without prior consent

The Human Medicines (Amendment) Regulations 2017 do not require consent to have been obtained for spare adrenaline devices to be used in an emergency.

The school will obtain advance consent from parents/carers or students for spare adrenaline devices to be used, so that in an emergency, consent can be assumed to be in place.

However, in an emergency situation, anyone may take reasonable action to save a life without checking whether prior consent has been given. This avoids potentially fatal delays in treatment.

8.5 Use of ADs off school premises

Students at risk of anaphylaxis who are able to administer their own adrenaline should carry their own ADs with them on school trips and off-site events

First aid kits for all approved off-site activities will contain two spare ADs, as per this policy. The Trip Leader will sign the kit out from the School Nurse. When the kit is returned, the School Nurse will check the kit to ensure that the AD is intact. If the AD has been used, the School Nurse will record this. The School Nurse and Trip Leader will then sign the kit back in.

9. Serious incidents and 'near misses'

A **serious incident** is any event relating directly to a medical condition (including allergy) in which a student, member of staff or visitor with a medical condition or allergy is harmed or is placed at an immediate and significant risk of harm, including situations requiring emergency medication, urgent clinical intervention or attendance by emergency services.

A **'near miss'** is an event relating directly to a medical condition (including allergy) that did not result in harm but had the clear potential to do so – for example, where an error, omission, or system failure could reasonably have led to a serious incident had circumstances been only slightly different.

9.1 Incident recording

The school will record serious incidents and 'near misses' relating to allergy safety as soon as is feasible. The incident will be recorded in the accident book, including the following information:

- Who was affected
- What happened, when and where
- Why the incident occurred (as far as is known)
- How staff and students responded and what was done to support the individual
- Whether emergency services were called
- How the incident concluded

The school will approach serious incidents and 'near misses' in a 'no blame' spirit of seeking to learn lessons.

9.2 Incident reporting

The parents/carers of a student aged up to 16 should be notified of the incident or 'near miss' as soon as possible. In the case of a student aged 16 or over, the school will confirm that the student agrees that their parents/carers should be informed.

The school will share the report with the student's parents/carers, the student or the individual involved.

They will be given the opportunity to discuss what happened and to contribute their views to the consequent lessons learned review. The school will then confirm what we have learnt from the incident and outline any actions we are taking as a result.

In some cases, the impact of exposure to an allergen at school may be delayed and not recognised until the student is at home. This means that incident reporting is not limited to staff – the student, parents/carers or others (such as healthcare professionals) will need to report to the school if there has been an incident with a delayed reaction.

Staff will always share the incident report with the School Nurse, who will share this information with the Allergy Safety Lead. The Allergy Safety Lead will consider whether the allergy safety arrangements in place were appropriate or if changes are needed to this policy and/or the student's IHP. Any learning will be shared appropriately with staff so they can act on them and reduce the chance of an incident reoccurring.

The school will also share the report with the Health and Safety Executive (HSE) if there is an incident which arises directly out of the way the school carried out a work activity which resulted in death or immediate

hospitalization. For example, where a student has suffered harm after consuming an allergen due to incorrect preparation of food by a member of staff.

In the event that the incident or 'near miss' was related to the delivery of a care plan or action plan issued by a healthcare professional, the relevant healthcare professional will be notified.

The school contracts a catering company to prepare and serve food on the premises. They have their own policy and their own duty to report accidents and near misses to the Local Authority, HSE and other relevant bodies.

10. Allergy awareness

10.1 Staff training

The school ensures that all staff expected to be present during times when students are scheduled to be on site receive allergy awareness training at least annually. New starters will complete this training as part of their induction.

This includes permanent staff, temporary staff, supply teachers, peripatetic staff, agency workers and regular volunteers. It also includes catering staff and others who may oversee students at breakfast or after-school clubs. It does not include contractors carrying out work with no student-facing role such as builders, electricians or other ad hoc maintenance personnel.

The school has purchased 'training pens' from EpiPen and Jext so staff can practice safely and be familiar with the differences.

The school will conduct allergy safety drills annually. This is a simulated case of anaphylaxis to test out how staff respond, without risk to any individual. The results of the drill will be recorded and used to inform the ongoing review of this policy.

Allergy awareness training will ensure that all staff:

- Have an awareness of allergy, the risks it poses, how allergic reactions can occur and how to manage it
- Understand that allergy includes multiple conditions (food allergy, asthma, eczema, hay fever, others), which can co-exist
- Understand the difference between food allergy, coeliac disease and food intolerance
- Know where to find information on allergy triggers
- Can identify the range of symptoms of allergic reactions
- Understand and can recognise anaphylaxis
- Know how to respond in an emergency, including:
    - Calling emergency services and informing parents/carers
    - How to locate and administer emergency medication
    - How to use the medication/device in an emergency
- Understand the impact allergy can have on a student's wellbeing
- Understand the school's Allergy Safety Policy
- Know how to check whether an individual is on the record of those with known allergy, and how to use an allergy or asthma action plan
- Understand their responsibilities in reducing the risk of individuals with known allergy coming into contact with their known allergens
- Understand how to report an allergic reaction or case of anaphylaxis (whether an incident or a 'near miss')

Allergy awareness training will be covered as part of the induction process for all new staff.

The Cover Manager will require details from cover agencies of the allergy awareness training that their staff have received. The school will only work with agencies that have offered the training detailed above. The Cover Manager will only engage agency staff once we have received proof that the named individual has completed allergy awareness training.

The Cover Manager will provide details of the following to all agency staff covering lessons at Bishop Luffa School:

- Details, including photos where possible, of all students who carry prescribed ADs
- A list of where spare ADs are kept, clearly marked on a map of the school
- Name and contact details for the School Nurse.

10.2 Awareness of Allergy Safety Policy

This allergy safety policy will be published on the school's website and shared with parents/carers at the start of the school year.

All staff should be aware of and understand the policy as part of annual allergy awareness training.
Students will be taught about allergies annually as part of the PSHE curriculum and as part of whole school training on first aid.

11. Wellbeing

Students with allergies will have additional support through:

- Pastoral care
- Regular check-ins with their tutor and Head of House
- Reassurance that steps are being taken to minimise the risks of exposure to allergen and that robust measures are in place in the event of anaphylaxis

The school will respond to any instance of bullying in line with its behavior policy.

11.1 Wellbeing support following an incident or 'near miss'

The school recognises that an incident or a 'near miss' is a serious event with a potential impact not only on the student but their family, those involved in responding. and any witnesses. The school will provide support to those involved.

The school will support staff involved in any incident or 'near miss'.

See section 9 of the policy for more detail on incidents and 'near misses'.

12. Information sharing

Information about an individual's health is considered special category data under UK GDPR. It will therefore be handled in line with our data protection policy.

13. Monitoring arrangements

The arrangements set out in this policy will be monitored by the Allergy Safety Lead.
The governing board will review and approve this policy annually, or more frequently if a serious incident or 'near miss' identifies an area for improvement.

14. Links to other policies

This policy links to the following policies and procedures:

- Health and safety policy
- Supporting pupils with medical conditions policy
- School food policy
- Data protection policy
- Behaviour policy

Appendix i.

Current arrangements for procuring spare ADs.

The School Nurse sources ADs for use in school and on school approved off-site activities.

Supplier: Eureka

Brand: Epipen

Dosage: 300mcg

Total number of ADs held in school: We currently have one spare AD in school at the moment, with one more on order.

Monique Langley
School Nurse.

Date: 2nd November 2026
