

# When do we get put into sets and how are they determined?

In the first few weeks you don't have a set, you are in your form,. You have tests with your whole form, based on how well you do in the test this determines the set. You can move sets when your teacher thinks you are ready.

**Finn 7 Andrewes**

For the first few day in math for example you and your class will be in the same math class. After a few days/week you will do a math test which will see what math set you will be put into.

Throughout your math lessons you might get asked to move up if they think you are good or move down if you need a bit of extra help.

**Olivia 7 Sherborne**

You get put into your sets in the first half term of year 7. You do a test to determine what set you will be in for maths, but you only get put into sets for maths in Year 7.

**Georgia 7 King**

You have about a two weeks with a random maths teacher with your form but then when you are put into sets it is with everyone in your side of the school. You do a mini test which puts you in your sets also your sats and cats scores are used. If they think the set is not right for you then they will move you up or down.

**Holly 7 Otter**

There are sets for different subjects and that is normally assessed by a test! but there is nothing to worry about! the sets are normally determined by a test.
